Which system is right for you?

- Condensing wall hung boiler up to 97% efficiency
- Full gas/air modulation
- Combi, provides heating and D.H.W.
- 50 litre storage tank built in
- D.H.W. re-circulation ready
- Built-in circulator, expansion tank and air eliminator
- Stainless steel heat-exchanger
- Available in natural gas and LP gas
- ASME rated
- Warranty is 2 years on parts and 10 years on heat-exchanger

Comfort in store

Those who choose a boiler with a storage tank are choosing the ease and comfort of a large hot water reserve. Planet Dewy 30/50 BF is Sime’s new wall-mounted high efficiency condensing boiler with a built-in storage tank. Equipped with an integrated 50 litre (13USgal) capacity stainless steel tank, Planet Dewy 30/50 BF is the ideal solution for those with multiple hot water outlets providing higher flow rates than a normal combi boiler.

The technological characteristics of the Planet Dewy 30/50 BF allow for excellent performance while respecting the environment by saving energy and reducing polluting emissions. Available in a 30 kW (110 kBTU/h) version, Planet Dewy 30/50 BF combines high efficiency performance with the availability of abundant hot water for domestic use instantaneously.

Simplicity, design and performance

The elegant and unmistakable aesthetics of Planet Dewy 30/50 is aimed above all else at easy use. The diagnostic is advanced and easy to understand. The temperature and pressure of the system are indicated through the indicator lights that are always visible on the command panel.

A green heart

At the heart of the Planet Dewy boiler is a combustion system that ensures the highest efficiency by extracting the most heat possible from the burned gas. Planet Dewy has an efficiency of up to 97% efficiency with annual efficiencies well above 90%. The advanced system also means pollution emissions are kept to a minimum for a greener environment. The NOx emissions are well within the limits set by regional standards.

The premixed condensation system of the Planet Dewy 30/50 BF

A The main heat exchanger is manufactured in high quality stainless steel (AISI 316 LC) to resist the corrosive action of the condensation that is produced. Its cylindrical shape, as well as efficiently collecting the condensate liquid, ensures that the best possible heat exchange takes place.

B The pre-mixed burner, also in stainless steel, is cylindrical and positioned radially in the combustion chamber. Its ‘micro-flame’ feature allows for a lower operating surface temperature which reduces significantly the amount of polluting emissions (nitrogen oxides) produced.

C Air and gas for combustion are introduced into the burner manifold pre-mixed in an ideal balance.

D The recovery of normally wasted energy occurs where the water vapour, present in the hot flue gases, condenses as it contacts the cooler surface created by the return water from the heating system.

Planet Dewy 30/50: meets all requirements

Committed to providing a range of boilers that meets all types of installation requirements, leading Italian boiler manufacture, Sime, has launched the Planet Dewy 30/50. This boiler provides all the performance of a hot water storage system with all the convenience of an instantaneous water heater. It truly is the best of both worlds as it offers both energy efficiency, and space saving opportunity. It also comes equipped with integrated recirculation capability. Each unit comes with threaded connections on the storage tank to connect a recirculation line. No recirculation capability is a common problem with instantaneous water heaters, but not with Sime.

It also features a safety valve, auto air vent, Grundfos pump and built-in frost protection. For simplicity of operation, it incorporates easy-to-use controls with a series of LED lights that indicate boiler function modes and assists with fault finding. Central heating, Instantaneous hot water on demand, 50 litre (13 USgal) storage capacity, all packaged up in a high efficient condensing wall hung boiler… The Planet Dewy 30/50 from SIME.
Safety and efficiency with stainless steel

Planet Dewy 30/50 storage combination system incorporates this clever all-in-one designed tank manufactured in high quality stainless steel harmonising security and efficiency. The particular shape of the tank with a double coil and a capacity of 50 litres (13 USgal), satisfies the highest demands for hot water and heating whilst reducing energy consumption, allowing a powerful high exchange that fully recharges the tank in approximately 6 minutes. Stainless steel is synonymous with reliability, less exposure to corrosion and increased hygiene.

The D.H.W. storage tank of the Planet Dewy 30/50

Logica Remote Control - Intelligent control

Planet Dewy 30/50’s output is enhanced by using Logica Remote Control heat control with external probe. This is a simple, effective system which optimises the system’s control, helping improve performance and reduce consumption.

WITH LOGICA REMOTE CONTROL AND EXTERNAL PROBE IT IS POSSIBLE TO:

- Control all boiler functions at a distance
- Use the thermostat timer system, with three operating temperatures
- Control the system in relation to the outside temperature (with optional probe)
- Control the boiler temperature through time programming
- Periodically raise the storage tank temperature to eliminate any pathogens (legionella control function)
- Signal any malfunctions, identifying the cause
- Anticipate and compensate for both external climate variations and external heat contributions (self learning function)
- Limit heating during the day or long periods when the outside temperature is higher than the room temperature (ECO function)
- Vary room temperature by a simple control adjustment, without modifying set programmes
- Interrupt the set programme for a holiday period, with automatic reset on return.

### Dimensions - Unit: mm (in)

![Diagram]

### Connections

- **M**: C.H. flow
- **R**: C.H. return
- **G**: Gas connection
- **E**: D.H.W. inlet
- **U**: D.H.W. outlet
- **C**: Recirculation
- **S3**: Condensation outlet Ø 25 (1 in)

### Main Features

- Frost stat built-in
- 10 year warranty heat exchanger
- Heating by-pass fitted
- Plug in clock option
- No compartment ventilation required
- Pre-wired electrical lead
- Full gas/air modulation
- Extended warranty options
- IPX4D electrical protection
- Combustion test facility
- Ready for installation of Logica Remote Control and external sensor (optional)
- C.H. and D.H.W. circulating pump with air separator
- D.H.W expansion vessel

Approved by the South Coast Air Quality Management District under rules 1146.2 and 222. This product is certified to the California Energy Commission in accordance with California law. Massachusetts Board of Plumbers and Gas Fitters Approval Code C1-0611-394.
